## AMENDMENTS TO THE CLAIMS

- 1-2. (Cancelled)
- 3. (Currently Amended) A copolymer according to Claim [[1]] 16, wherein said reactive silicon-containing group is an alkoxysilyl-containing group.
  - 4. (Cancelled)
- 5. (Currently Amended) A copolymer according to Claim [[1]] 16, wherein said A has a structure represented by the following formula

$$\left( COO-R^1 \right)_y$$
 Si $(OR^2)_3$ 

wherein,  $R^1$  is an alkylene group having 1 to 10 carbon atoms or an arylene group having 6 to 20 carbon atoms,  $R^2$  is an alkyl group having 1 to 10 carbon atoms, and y is 0 or 1.

- 6-7. (Cancelled)
- 8. (Currently Amended) A copolymer according to Claim [[1]] 16, wherein said Q is a hydrogen atom, a carboxyl group, an alkoxycarbonyl group having 1 to 9 carbon atoms, an alkyl group having 1 to 8 carbon atoms, an aryl group having 6 to 20 carbon atoms or a halogen atom.
- 9. (Currently Amended) A method of producing a copolymer according to Claim [[1]] 16, comprising the step of radical-polymerizing a monomer mixture containing an unsaturated monomer

having a reactive silicon-containing group and an unsaturated monomer compatible with said reactive silicon-containing group by using a macropolymerization initiator having a polycondensation segment.

- 10. (Currently Amended) A method of producing a copolymer according to Claim [[1]]

  16, comprising the step of radical-polymerizing a monomer mixture containing an unsaturated monomer having a reactive silicon-containing group, an unsaturated macromer having a polycondensation segment and an unsaturated monomer compatible with said reactive silicon-containing group.
- 11. (**Currently Amended**) A method according to Claim [[9]] <u>16</u>, wherein said reactive silicon–containing group is an alkoxysilyl–containing group.

## 12. (Cancelled)

- 13. (**Currently Amended**) A method of producing an organic-inorganic hybrid polymeric material, comprising the step of hydrolyzing and polycondensing the copolymer according to Claim [[1]] 16.
- 14. (Currently Amended) A method of producing an organic-inorganic hybrid polymeric material, comprising the step of hydrolyzing and polycondensing the copolymer of Claim [[1]] 16 in

## Application Serial No. 10/736,708

the presence of a metal, a metal alkoxide compound, a metal oxide, a metal complex or an inorganic salt selected from the group consisting of Si, Ti, Zr, Al, Fe, Cu, Sn, B, Ge, Ce, Ta and W.

15. (Original) An organic-inorganic hybrid polymeric material produced by the method according to Claim 13 or 14.

16. (Previously Presented) A copolymer comprising:

a polyethylene segment which is a main chain;

a reactive silicon-containing group which is a side group of the polyethylene segment; and

a polycondensation segment bonded to the polyethylene segment, which is a part of the main chain together with the polyethylene segment or a side chain with respect to the polyethylene

segment, which comprises a repeating unit represented by the following formula

wherein,

A is a reactive silicon–containing group,

R is each independently a hydrogen atom or an alkyl group having 1 to 8 carbon atoms,

Q is a group compatible with the reactive silicon-containing group,

E is a polycondensation segment which is a part of a main chain, or a polyethylene segment having a polycondensation segment as a side chain,

m is an integer of 1 or more,

Application Serial No. 10/736,708

n is an integer of 0 or 1 or more,

k is an integer of 1 or more, and

E has a structure represented by the following formula

$$\begin{array}{c|c}
 & R^4 \\
 & R_2 \\
 & C \\
 & C \\
 & COO \\
 & E^1 \\
 & OH
\end{array}$$

wherein,  $E^1$  is a segment of polycarbonate, polyarylate or polysulfone,  $R^4$  is a hydrogen atom or an alkyl group having 1 to 8 carbon atoms, and x is an integer of 1 or more;

or the following formula

wherein,  $E^1$ ,  $R^4$  and x are the same as defined above, and Z is each independently a segment of another polymer.
